Phase 10: Final Presentation & Demo Day

This final phase was dedicated to showcasing the completed Pet Adoption Management application through a comprehensive, live demonstration. The goal was to present a clear, end-to-end narrative that highlighted how the Salesforce solution successfully solves the initial problems faced by animal shelters. The presentation was structured to walk through the entire adoption lifecycle from the perspective of both an adopter and a shelter staff member.

Step-by-Step Process:

1. Demoing the Adopter's Journey: The presentation began by demonstrating the public-facing portal built with Experience Cloud. This involved showing the "Available Pets" page where a potential adopter can browse animals. A specific pet was then selected to navigate to its detail page, simulating the initial search and discovery process for a new owner.

2. Illustrating the Staff's Workflow: The demo then transitioned to the internal Salesforce application to showcase the staff's experience. An adoption request record was opened and its status was changed to "Approved." This action triggered the automated flow, and the demonstration highlighted the immediate, automatic update of the pet's status to "Adopted."

3. Showcasing Data and Analytics: To demonstrate the value for shelter management, the "Shelter Overview" dashboard was presented. It was shown how the "Pets by Status" chart automatically updated in real-time following the recent adoption, providing immediate, visual insights into shelter operations.

4. Highlighting the Full Lifecycle: The presentation concluded by summarizing the full project lifecycle. This narrative connected the initial problem analysis, the data model design, the automation with Flow, the user interface development, the portal creation, and the final analytics, successfully demonstrating a complete and functional application.
